

Lean Behaviour-Based Safety & Safety Culture Excellence

A One-Day Workshop

Presented by the Saskatchewan Section #414 of American Society for Quality

Course Description:

The journey towards excellence in quality and safety are one in the same. No one designs a process to produce defects. Likewise, no one creates a safety system to produce injuries. Many principles necessary to achieve world class quality can also be applied to safety. Utilizing the latest Lean Behaviour-Based Safety techniques, hundreds of global organizations have achieved and sustained safety excellence. This seminar discovers the opportunities to apply these advanced behavioural and cultural principles to both safety and quality. Explore the elements necessary to internally achieve and sustain operational excellence by focusing on your most effective sustainability tool, your culture.

What you will learn:

- How to apply lean thinking to Behaviour-Based Safety & culture
- The parallel of quality and safety excellence
- The role culture plays in quality and safety excellence
- The elements necessary to achieve Safety Culture Excellence
- Examples of Behaviour-Based Quality in practice
- The options available for Behavior and Culture-Based implementations in today's lean atmosphere

Instructor:

Shawn Galloway, President and COO of ProAct Safety, Inc. of Texas, has worked with dozens of international organizations and hundreds of locations of varying size, industry and complexity. His expertise has been sought out globally to assist in integrating safety initiatives and process efficiency by focusing on Operating Procedures, Incident Investigation, Management of Change, training elements of OSHA's Process Safety Management standard and customizing new BBS implementation path strategies or improving existing processes. Producer of weekly podcast Safety Culture Excellence.
